

## Snow Mawler – a plough with ‘attitude’

Ploughing snow in shirt sleeve comfort is possible with the Airport Technologies PV-400 Snow Mawler – a high tech snow clearance vehicle with a forward-mounted cab to enhance visibility. Constructed in a modular fashion that allows easy maintenance access and quick replenishment of consumables, the plough can operate at speeds of up to 50mph and costs C\$200,000. The cab has been designed to ensure operators look outside as much as possible by positioning essential instruments in the windscreen pillars and a multi-function ‘hands-on-throttle and stick’ style controller ensures that blade operation can be handled instinctively. Four Snow Mawlers are in operation at Winnipeg Airport and two more have been ordered for Serco in Goose Bay, Labrador. Although the company is only 15 employees strong, a plough can be delivered within just four months of order placement.
